MEDIX APP WIREFRAME

When I embarked on the journey to challenge myself in designing an app, I wanted it to be one that I could be passionate about. As the son of two parents who have had to rely on medication to survive Diabetes and Parkinson's Disease, I witnessed them having to brave the four seasons of Wisconsin to get their prescriptions after I left to college.

Medix is an app that our generation of mobile users is already familiar with. It's like Uber, Postmates, or DoorDash, but for your meds. I came up with this idea because technology is meant to make our lives easier. I wanted to solve a problem that has affected my family and friends for a very long time by putting the power in the palm of their hands through Medix.

Using apps like Adobe Illustrator and Adobe Xd, I was able to take these wireframes and bring them to life in a working prototype. An iterative design process took me from a humble rough draft into a new and improved user interface that is hopefully simple to understand and easy to use.

People of all ages use medicine for various reasons in life, and hopefully Medix can improve the quality of life for the collective whole by removing the step of having to leave the house.

THANKS FOR READING!
